

## Brampton Crane Operator Certification

Brampton Crane Operator Certification - The process to permit you to operate specific types of cranes is to take crane operator certification training to acquire certification. The certification process incorporates hands-on practice, classroom learning and an aptitude assessment. Various training programs are offered for overhead cranes, mobile cranes, boom trucks, tower cranes, forklifts and various hoisting machinery. Trainees will know the basics of equipment characteristics, safety, and operational practices associated with these kinds of cranes.

### Customized Practical Evaluation and Training:

Companies could request customized practical evaluation and training on-site at the work facility after the in-class session. Two operators will be trained at a time by one instructor. The duration of time needed for training will vary depending on the employer's levels of ability and machine kind, but normally needs one to two hours. The training would concentrate on practical skills like right rigging practices, safe operating procedures and planning the lift. Employers must pre-schedule the on-site session.

After in-class instruction, practical operating instruction and assessment, and written test, the trainee would receive an individual wallet certificate and the company will receive a wall certificate. To achieve certification, trainees need to have an 80 percent passing score on both practical and written tests.

Included in the crane operator certification program is the following: Manuals, policies and regulations; hazards of high voltage; safety concerns; communications and signals; emergency rescue procedures; components, terms and types; pre-operational inspection; crane configuration and capacity; pre-lift planning and set-up; hammerhead / luffing jib crane operations; wire rope and rigging; climbing cranes; fall protection; WHMIS; crane maintenance and CPR & First aid.

The minimum basics for becoming an overhead crane operator include possessing the mental and physical capability required to be able to do crane work. Basic capabilities consist of depth perception, normal field of vision, reaction time, coordination and manual dexterity. Potential operators should not have the tendency to become lightheaded. Operators who do not already have evidence of qualifications and experience must acquire certification. Operators must be qualified to operate the certain type of machinery which they would be using to do their task.
