

## **Brampton Forklift Training School**

Brampton Forklift Training School - Forklift Training School And What It Actually Has To Provide - Federal and industry regulators have established the criteria for forklift safety training based on their existing standards and regulations. Individuals wanting to operate a forklift should finish a forklift training program before making use of one of these equipment. The accredited Forklift Operator Training Program is designed to provide trainees with the practical skills and information to become a forklift operator.

Vehicle and Mobile Equipment safety regulations that apply to forklift utilization involve pre-shift inspections, and regulations for loading and lifting.

An inspection checklist should be carried out and given to the supervising authority prior to starting a shift. When a maintenance problem is uncovered, the use of the particular equipment must be discontinued until the issue has been dealt with. To be able to indicate the equipment is out of service, the keys must be removed from the ignition and a warning tag placed in a visible location.

Safety rules for loading will include checking the forklift's load rating capacity to determine how much the machinery could handle. When starting the equipment, the forks should be in the down position. Don't forget that there is a loss of approximately one hundred pounds carrying capacity for every one inch further away from the carriage which the load is carried.

Lifting must start with the driver moving to a stopped position approximately three inches from the load. The mast should then be leveled until it has reached a right angle with the load. Lift the forks to an inch underneath the slot on the pallet and drive forward. Afterward lift forks four inches. Tilt back the load to secure it for moving. Drive the lift backwards if the load obscures frontal vision. Check behind and honk to warn other staff. Never allow forks to drag on the ground.
