

Brampton Boom Lift Training

Brampton Boom Lift Training - Aerial platforms or likewise known as elevated work platforms are devices that allow workers to carry out duties and tasks at elevated heights that would not be otherwise accessible. There are various aerial lifts on the market to perform various applications under various site conditions. If operated carelessly, elevated work platforms could cause fatality or serious injury. The most common causes of related accidents are electrocution, falls, tip-overs and crushed body parts. Lift operators should be fully trained in techniques to prevent accidents during the operation of lifts.

Aerial Lift Safety course is intended for people who must operate the devices more safely and effectively. The program provides thorough instruction about the most used lifting devices within the industry.. Types of lift covered include scissor, articulating and boom supported aerial lifts. The video presents the right techniques operators must follow. Instruction focuses on protection against falls, pre-operational inspection, stability of the device and safe driving procedures.

The boom lift training course will help to address equipment reliability and employee safety, making use of materials which are completely compliant with your regional and local regulations and requirements. Training methods and course management would be taught. The trainer will also know the technical aspects of aerial lift safety.

Both practical training and classroom training are components of the Aerial Platform/Boom Truck Training program. Both sessions should be finished successfully for the participant to receive a certificate of achievement.

The difference between self-propelled elevating work platforms and self-propelled boom-supported elevating work platforms is that, on the latter type, work platforms can be positioned totally beyond the base of the machine. The theoretical component of the training is nearly the same for both types. The practical component of the training can be completed more quickly if just one type of machinery is used.

Elevating Work Platform Training Program Objectives:

For the safe operation of Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms, boom lift training will help operators utilize their equipment more effectively and would lessen the chances of workplace accidents. Trainees would review of applicable rules and business policies, discuss Due Diligence, review Criminal Negligence and consequences to employers, trainers, employees and supervisors. Participants would review equipment features, stability, operating procedures, fueling/charging procedures and parking. Site-specific safety issues would be addressed.
