On the whole pallet jacks are made of heavy duty materials to endure extreme weights. Pallet stackers are occasionally identified as pallet jacks. They can be operated from a seated, upright or walk-behind position. Pallet stackers are divided into manual and powered styles.

Certain fundamental items comprise the pallet jack. There are forks which slide underneath a pallet, capable of moving and lifting it to a desired height. The engine compartment or casing houses the gas-run, electronic or hydraulic gear that powers the machine.

Manual pallet jacks are hand-powered. They operate hydraulically to make lifting burdensome pallets an easier task. Usually a walk-behind version meaning they are utilized by pulling and pushing the jack to its desired location. Using a foot pedal or lever raises the stacker's forks. Squeezing a lever or trigger returns the forks to the ground. These types of pallet jacks are ideal for lighter loads of up to approximately 1 ton or 907.18 kg.

Electric or gas powered pallet stackers can accommodate extreme lifting weights of up to 5 tons or 4535.92 kg. They are physically less demanding than the manual styles due to the mechanized power to raise and lower the stacker's forks. These models are steered by rotating the handle in a specific direction. There is a button on the knob that functions to raise and lower the forks. A throttle set up on the stacker's grips moves the appliance forward and in reverse. This variety of equipment is commonly known as a forklift and is operated from a sit-down position.

As the fork width, load limit and lift height vary dramatically between specific models, choosing the correct pallet stacker to fit the activity is vital. Some stacker's lift height may permit multiple pallets to be stacked, while others may only allow two at a time. Certain designs of these hoists feature an modifiable fork in order to allow the stacker to slide beneath pallets of atypical sizes and shapes. These versions are effective when various styles of pallets are used within a workspace.
